To calculate filing fees, refer to the category fee list and examples in the instructions for filling out WPA Form 3 (Notice of Intent).

B. Fees

Fee should be calculated using the following process & worksheet. **Please see Instructions before filling out worksheet.**

Step 1/Type of Activity: Describe each type of activity that will occur in wetland resource area and buffer zone.

Step 2/Number of Activities: Identify the number of each type of activity.

Step 3/Individual Activity Fee: Identify each activity fee from the six project categories listed in the instructions.

Step 4/Subtotal Activity Fee: Multiply the number of activities (identified in Step 2) times the fee per category (identified in Step 3) to reach a subtotal fee amount. Note: If any of these activities are in a Riverfront Area in addition to another Resource Area or the Buffer Zone, the fee per activity should be multiplied by 1.5 and then added to the subtotal amount.

Step 5/Total Project Fee: Determine the total project fee by adding the subtotal amounts from Step 4.

Step 6/Fee Payments: To calculate the state share of the fee, divide the total fee in half and subtract \$12.50. To calculate the city/town share of the fee, divide the total fee in half and add \$12.50.

Delineation Report

November 9 2023

The following is a report on the delineation of the wetland resource areas at 241 Georgetown Rd Boxford, MA. The delineation was done November 2 2023. The jurisdictional wetland resource area present on site may include: 310 10.54 Bank, 310 CMR 10.55 Bordering Vegetated Wetland. The wetland borders on an intermittent stream that ultimately flows into Penn Brook.

Delineation Method

A wetland delineation is done by visual survey of topography, evidence of hydrology, and identification of plant species. A determination is made for each plant species as to their indicator status as referenced in the "National List of Plant Species that Occur in Wetlands", published by the Fish and Wildlife Service. The boundary of the wetland is then determined to be where 50% or more of the vegetation community consists of wetland indicator species with a status of FAC or wetter. Where there is a dominance of wetland plants species, evidence of hydrology is looked for, i.e. water stained leaves, drainage patterns, morphological adaptations, and hydric soils. Typically, hydric soils are determined by digging or augering a pit 20" deep and observing the horizons for color and features. Determinations are made referencing "Field Indicators for Identifying Hydric Soils in New England" and color matched to the Munsell Soil Color Charts.

Flagging Series

The wetland resource area is delineated by the flagging series 1A-12A. The wetland delineated is a bordering vegetated wetland that borders on an intermittent stream.

Vegetation

The vegetation along the delineated area consists of the following dominant species:

Maple, Red <i>Acer rubrum</i>	FAC
Oak, Red <i>Quercus rubra</i>	FACU
Pine, White <i>Pinus strobus</i>	FACU
Pepperbush <i>Clethra alnifolia</i>	FAC
Aster New England <i>Aster novae-angliae</i>	FACW
Fern Bracken <i>Pteridium aquilinum</i>	FACU
Fern Cinnamon <i>Osmunda cinnamomea</i>	FACW
Bittersweet <i>Celastrus orbiculata</i>	UPL

Soils

As referenced to the NRCS Soil Survey, the soils on the subject property are Canton in the uplands and Freetown in the wetlands. Freetown soils are nearly level deep very poorly drained organic soils in depressions and on flat areas of upland and glacial outwash plains. They have a water table at or near the surface most of the year. Canton soils are deep well drained soils in uplands on the lower slopes of hills. Field observations are consistent with the survey.

The typical soil profiles observed were:

SP upland

O <1"
A 0" – 10" 10YR 2/2
B 10"-18" 10YR 4/4

SP hydric

O <1"
A 0" – 16" 10YR 2/1 muck
B 16"-18" 10YR 4/2 redox

Indicators of hydrology

Along with the presence of hydric soil conditions other indicators of hydrology were observed. Those indicators include: water-stained leaves, drainage patterns.

Rare Species

Under MESA and 310 CMR 10:59 Estimated Habitats of Rare Wildlife, any work proposed, regardless of wetlands, within an Estimated or Priority habitat shall be reviewed by the NHESP as well as the Conservation Commission. The site is not located within an Estimated or Priority Habitat

Vernal Pools

There are no certified vernal pools on the property per the most recent NHESP map.

FEMA

As referenced to the FEMA flood data maps, the property is not located within a regulatory flood zone.

If you have any questions, please do not hesitate to contact me at lbasbanes@gmail.com. Thank you.

Sincerely,

Leah D. Basbanes, M.A.
Wetland Consultant/Biologist

The wetland resource areas were delineated/reviewed in the keeping with the Massachusetts Wetland Protection Act and were done so to the best of our abilities. Considering all the variables (seasonal growth form of vegetation, soils conditions, topography, weather, etc.) involved in such an effort, please be advised that despite the best effort, no wetland delineation is considered definitive until verified and approved by the final issuing authority.
